# Collaborative Planning

---

Presently, travelers discuss about the plan either on WhatsApp or some other IM app.

This poses several challenges and limitation:

- 1. No clear discussion agenda.
- 2. Conclusion is not recorded.
- 3. No method to approximate budget.
- 4. To-do list has no existence.
- 5. No summary generation of journey.
- 6. Absence of any planner or scheduler for reference.

# Collaborative Planning

---

Yet, most of user's resort to favorite IM app.

Limitations of IM of make planning for journey

- Confusing, with each member discussing his own topic on common chat thread.
- Tiring, scrolling up, just to see what was the conclusion of discussion.
- Too much to remember, all the to-do tasks, dates soon become too much to handle.
- No unified solution, for group planning of tour, using other apps for notes, budget.

# Why GoGoGo?

---

Our app provides the solution to the issues faced by the travelers. How ?

- 1. New chat thread for each new topic
- 2. Generate chat summary, so that members can view them later.
- 3. Maintain and track to-do list.
- 4. Calculate approximate budget.
- 5. Develop and share journey schedules.
- 6. Generate complete journey summary.

All the features are readily available, providing an effective user experience. This app separates itself from other team-collaboration apps, which are difficult to use and surely an overkill for such basic requirement.

# Login Screen

In our app, each user can login with his username and password.

This allows, user specific customization and features. Each user is treated as unique entity, allowing features like sharing tasks, budgets, chats between different users.

# Journey Home Screen

After signing in, user can choose to create a new journey, join a existing journey or open an already joined/created journey.

Thus every journey has a fresh interface, saving itself from cluttering with information of different journeys. Each journey will have different members, which will be allowed by admin(creator of the journey).

### Create Journey

  
yyyy/mm/dd

### Join Journey

# Main Screen

The journey home-screen, from where all the functions can be accessed.

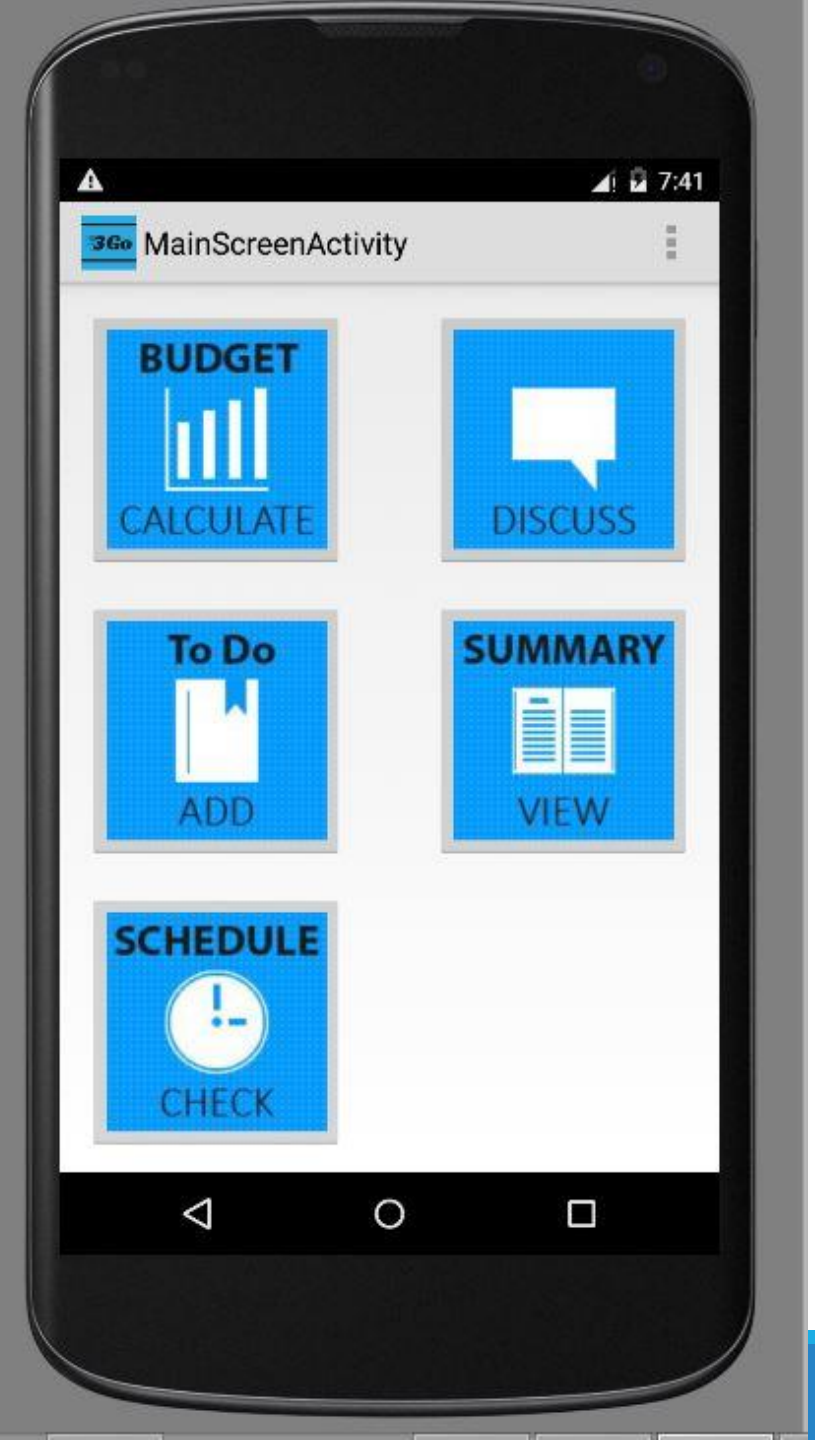

Budget: To calculate budget.

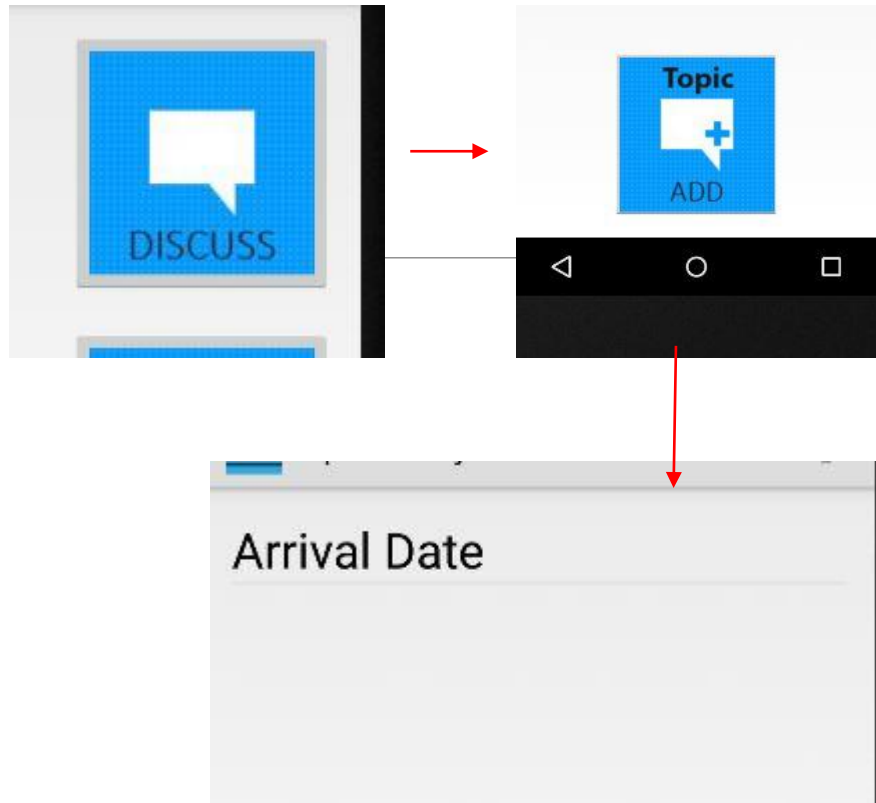

Discuss: To chat threads, topic-wise.

To-Do: Create/Complete To-Do tasks.

Summary: Generate the complete summary at one glance.

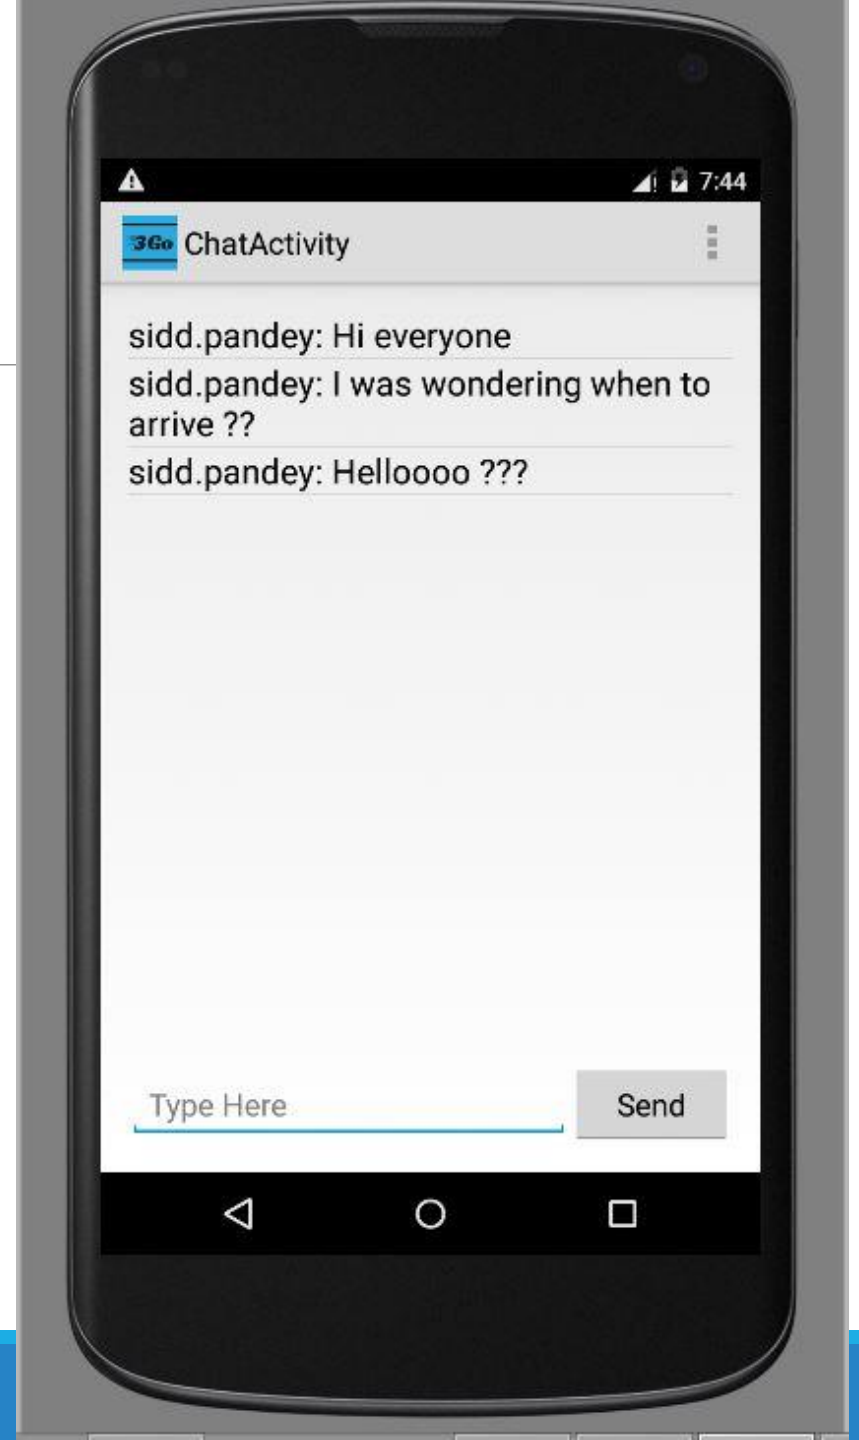

Scheduler: Make/Share schedule (feature could not be finished).

# Discuss and Chat Threads

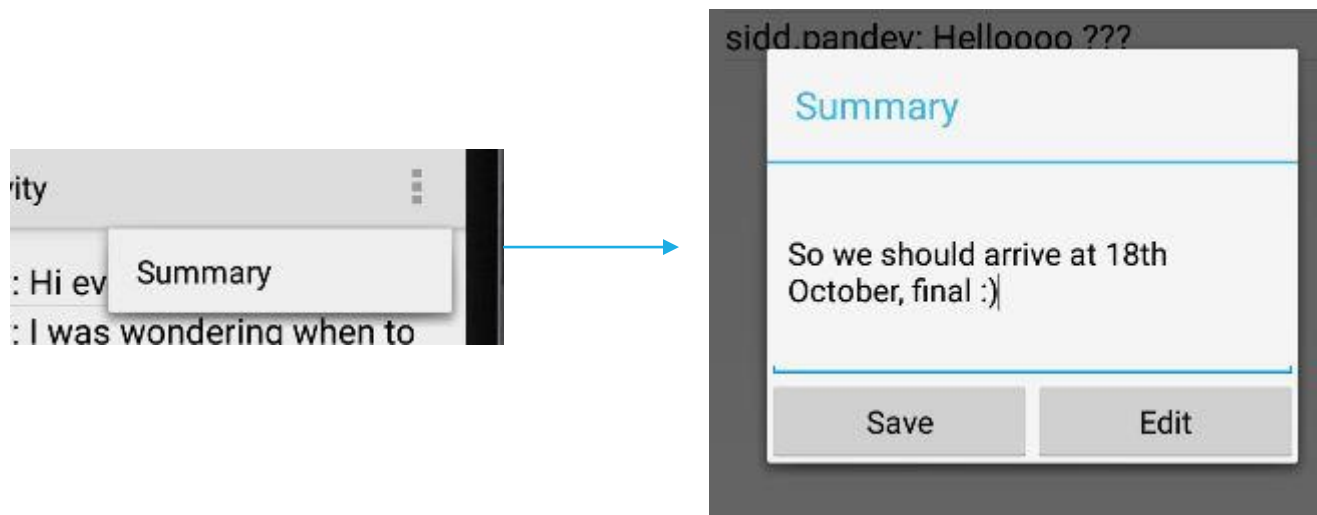

In discuss, create a topic for each new thing user want to discuss about. For instance, arrival date, train, stuff to pack, places to visit. This allows each topic to have its own space, so it does not mix with other topics, and there is less confusion between users.

# Adding Summary

---

Save the summary for the topic after the discussion has ended.

This summary can be accessed by from ActionBar and Journey Summary option from home screen.

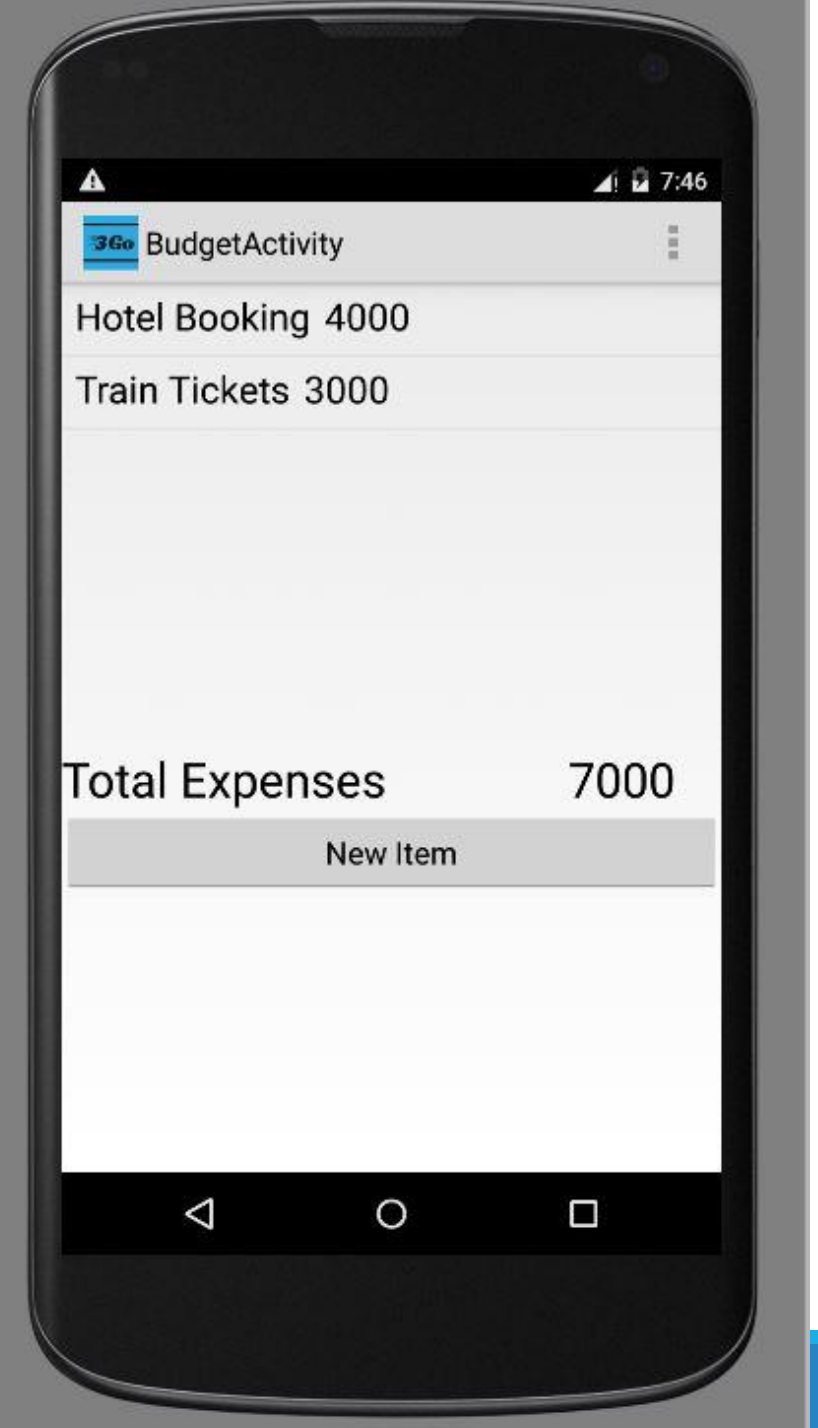

Summary allows the users, those who have missed the discussion to get idea of what was decided during the meeting.

# Budget

---

Add budget details of the journey.

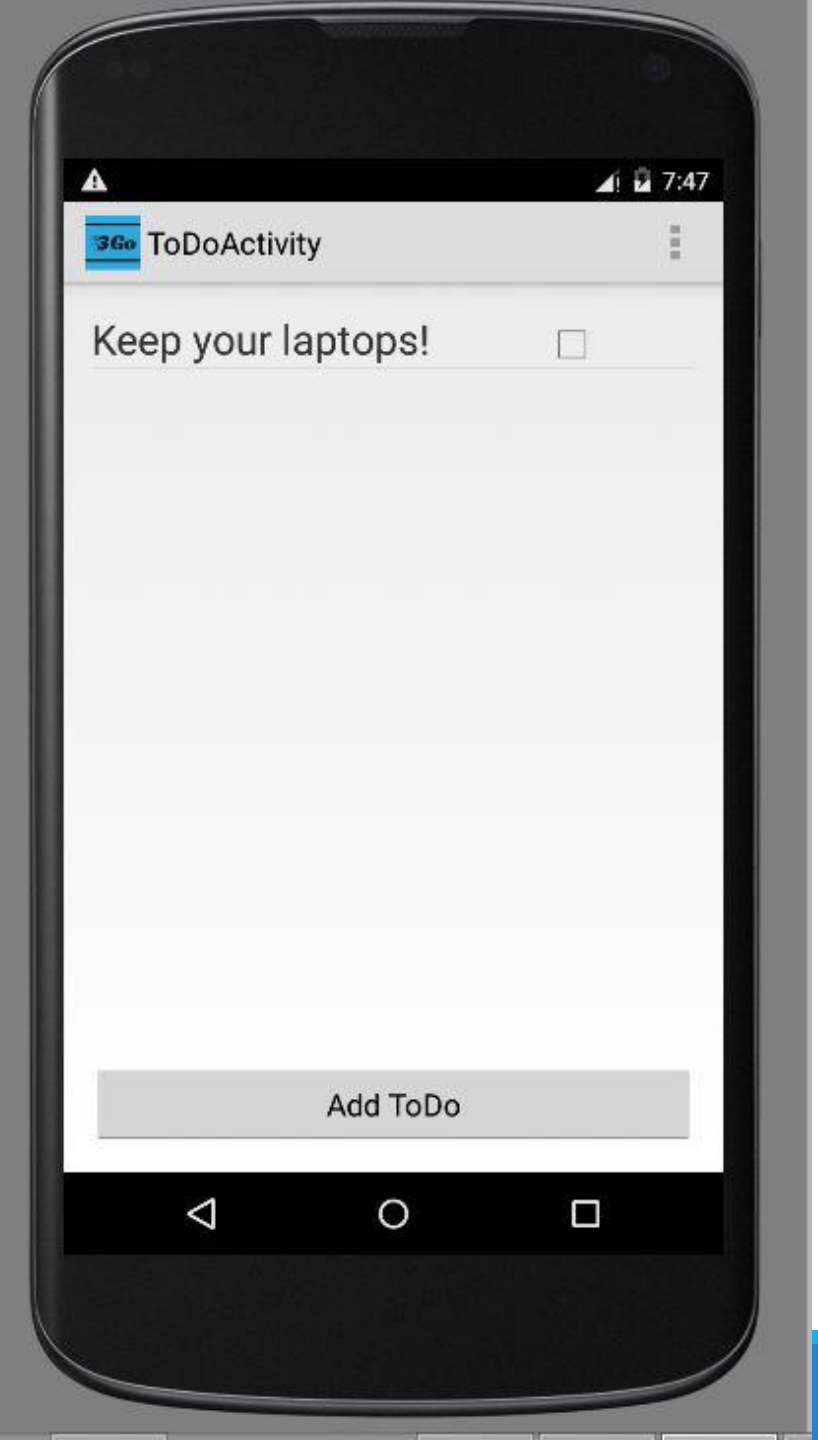

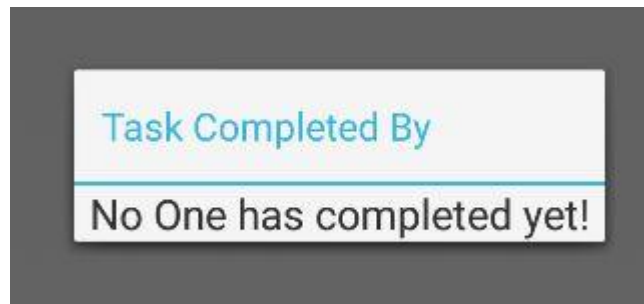

It allows approximation of the expenses, so that everyone can come prepared.

# To-Do List

Users can create and save To-Do task.

Each user will have its own To-Do task list.  
Clicking on the task, user can view name of the people who have complete the task. This allows tracking of the status of To-Do task.

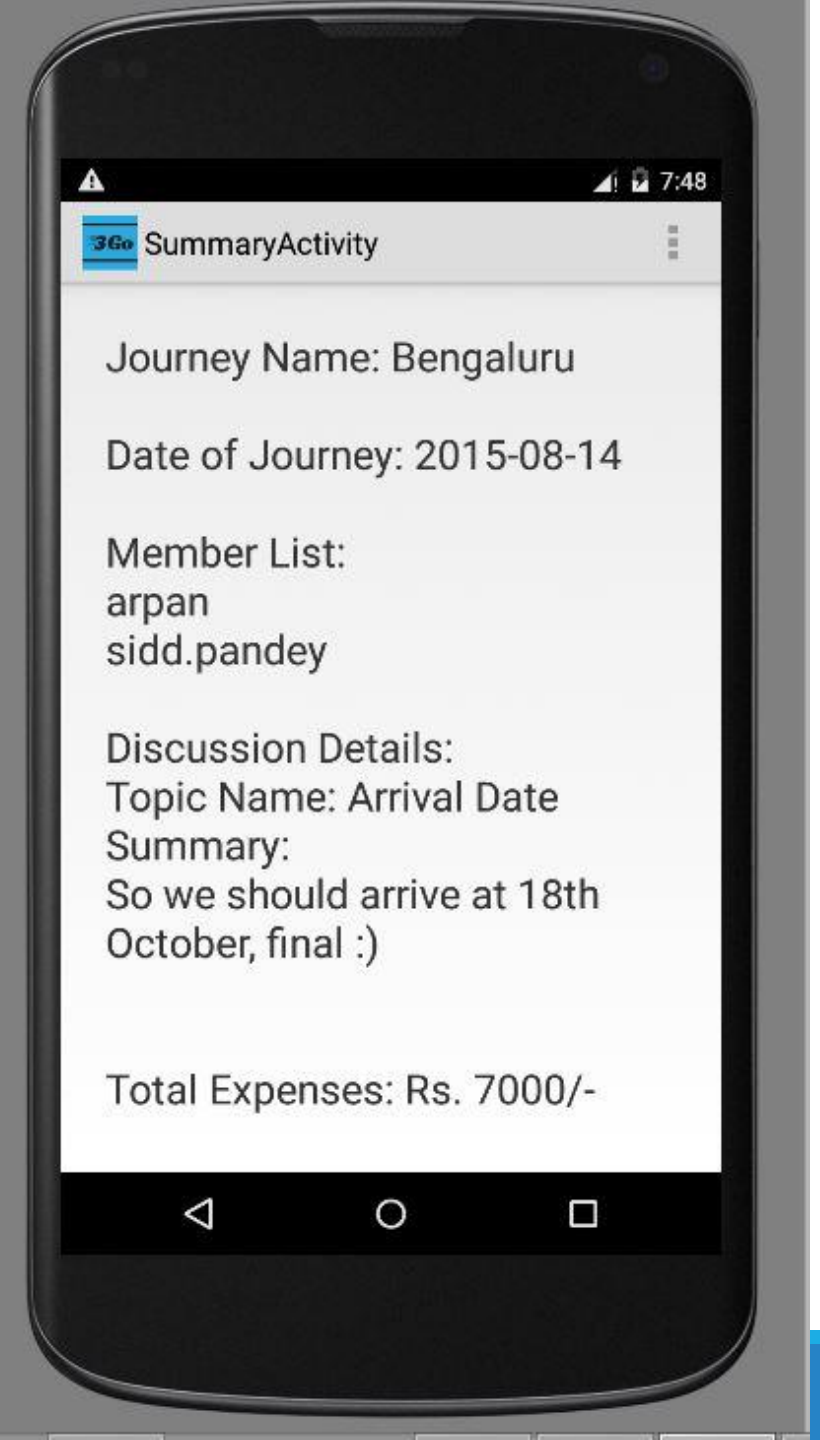

# Journey Summary

---

User can generate summary, of the complete journey.

This is the place to visit, to know everything about the journey at a single touch.

# Instructions to run

---

---

# Thanks!
